

Upgrade **EnergyPro**<sup>®</sup> Virtual Energy Manager to Client-Server and get the benefit of multi-user access, ODBC access and a platform for growth.

**EnergyPro**<sup>®</sup> is based on a world leading database platform – 4D. Now 4D Server integrates a powerful relational database, a SQL server, and an application server, all in one product. 4D Server's architecture is independent of the selected platform, so 4D Server can be run on either Mac or Windows.

4D Server guarantees optimized client access management by using powerful client/server processes. Administrative tasks, such as backup or memory optimization, are handled automatically from the server. Deployment of **EnergyPro**<sup>®</sup> application updates are fully automated, which makes 4D Server a true zero administration server.

4D servers can communicate with external databases (Oracle, Microsoft, etc.) as easily as with Web services on any platform (Microsoft .NET, J2EE, Apple) or application (SAP, MS Office).

### What's Included

- License for 2 concurrent users, on either Mac or Windows
- SQL database engine
- Integrated Client/Server architecture
- SQL Server
- Web services client
- Built-in Maintenance and Security Center

### Available Options

- 4D Client Expansion (additional concurrent user licenses)
- 4D SQL Expansion (allows unlimited external SQL connections)
- 4D Web Application Expansion (integrated dynamic and static HTTP)
- 4D Web Services Expansion (integrated Web Services server)
