

“Effective energy management means spending 80% of time and focus on management and targeted initiatives and less time on data collection and processing”

EnergyPro® Virtual Energy Manager™ has been developed to deliver an accurate understanding and effective control over all energy utilities usage, costs and carbon footprint to leading NZ organisations since 1992.

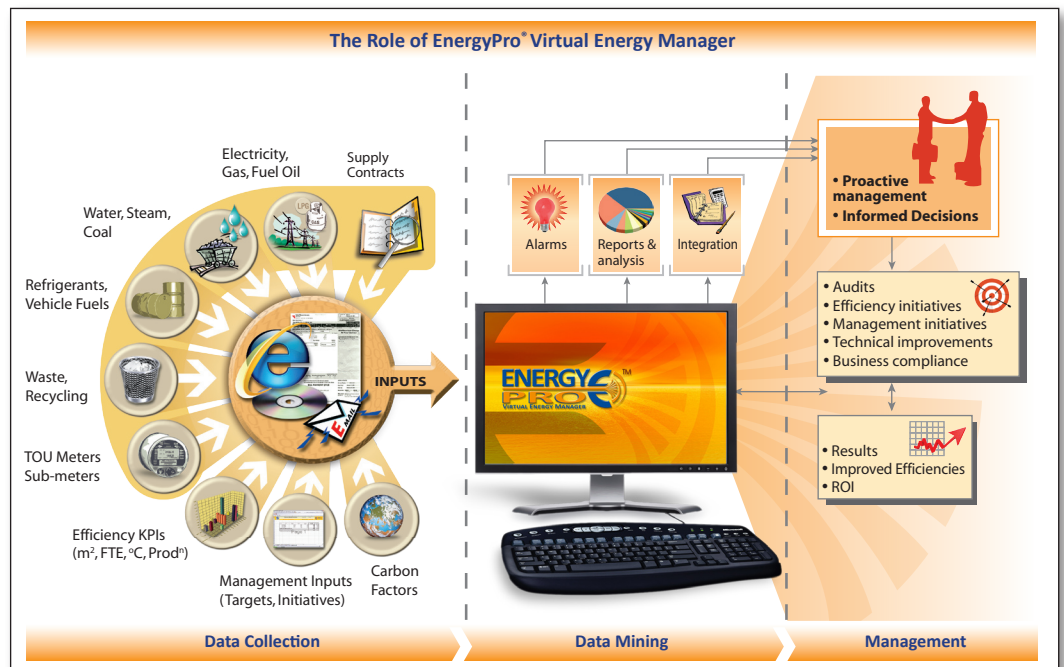

The core of EnergyPro® is the integration and retention of all energy information and the ability to automatically process, audit, analyse, monitor and report from a central database. This adds administrative efficiencies, better analysis and enterprise-wide reporting and management.

EnergyPro® enables easy and simple bills processing and verification with purchasing profiles and abnormality alarms. Combined with accurate benchmarking, management control, reporting and analysis, **the system empowers Energy Managers and the team to be more proactive on energy saving initiatives.**

Without the need to resort to user dependant, complex spreadsheets, EnergyPro® establishes a powerful and on-going compliant platform for efficient energy utilities management and GHG reporting. By staying ahead of energy utilities industry, energy management and ICT technology – EnergyPro delivers control and confidence. This combined with our Energy Management expertise, market knowledge and implementation support, we can configure an EnergyPro® Solution to meet your needs and management objectives.

See our website for more information.

Benefits include:

- Enterprise-wide management, integrating energy utility information, providing instant overviews and clearer pictures.
- Save time and cost through automating the data collection, auditing of invoices, analysis and reporting. Integrate with other internal systems to ensure productivity.
- Free up time & resources as management can delegate or outsource these tasks with confidence.
- Minimise risks by comprehensively verifying billing accuracies, cost structure and usage consistency, independent of people.
- Improve communication with consistent and meaningful reports, tailored to key personnel and management queries. Provide an auditable framework for energy conservation actions, accountability and environmental reporting.
- Improve energy procurement decisions and processes, with understanding of line and energy costs, usage profiles and monitoring of contract performances.
- Covers all form of energy utilities such as electricity, gas, water, fuel and carbon activities. TOU and submeter modules allow easy information gathering and advanced data mining.
- Scalable and configurable to match your needs with advanced modules. The system covers from basic or advanced energy management requirements.
- Access to the software can either be as a fully outsourced bureau service, remote access or as a fully site installed solution, providing the ultimate in control.

Client Comments

“With around 200 utility accounts, it is essential to maintain an up-to-date overview of total consumption & expenditure, while having the ability to undertake detailed investigations. EnergyPro® fulfils these requirements with only a few keystrokes.”

“EnergyPro® allowed us to pick up errors in metering equipment and supplier’s charges, reduced annual budgeting time from days to a couple of hours and see the impact of energy savings initiatives: all in an easy-to-use package.”

“It allows us to control and manage over 420 gas and electricity accounts each month and gives us the confidence that we are paying what we should be. Our budgeting has improved & the EnergyPro® standard reports are ideal for communicating to staff.”
